

SCIENCE™ — the new trademark for science magazine programmes. Designed to inspire the next generation, to intrigue and fuel enthusiasm for a topic not only restricted to labs and universities: science.

We meet physicists at CERN, initiators of citizen's movements, engineers and, just in general, people who are about to change the world — through their dreams, their ambitions and relentless joy with which they pursue the former. People who normally aren't in the media's centre of attention now take centre stage and show us that science can be found in most unexpected places — and still be of major importance. A presenter-led science magazine, exploring what's possible — and daring to go even beyond ...

- An ex-NASA-scientist, who, together with an amateur submarine engineer, builds a rocket, which will launch one of them into space.
- A creative geographer, who thought of constructing a globe just for kicks, resulting in him founding a whole company.

- A young ecologist, who shares the outcome of her thesis with a whole town, thus changing its inhabitants' lives forever.
- A passionate scientist, engaging himself in the fields of biology and robotics, who taught himself to communicate with bees.
- A dedicated marine biologist and diver, who explores a nearly unknown world.
- An enthusiastic chef, who builds his own gigantic amusement park in the backyard of his restaurant.
- A volcanologist who takes us deep into 'his own', very dangerous realm.
- A city, which runs out of garbage, the story's backgrounds and solutions.
- A stem cell researcher, who might just be on the brink of finding an answer how to suppress cancer.
- The first officially acknowledged cyborg ever, and his amazing story.

Showing the audience at home how science works nowadays is the ultimate aim of these entertaining as well as informative mini-documentaries, which, in traditional high-quality style of Terra Mater Factual Studios, make up "SCIENCE™".
