50 SHAPES OF PREY

Executive producers: **Sabine Holzer, Walter Köhler**
5 × 50 min., 4K, 5.1 + Stereo

Wildlife films frequently show slow-motion, magnificent predators chasing their prey – and just occasionally one quarry escapes. But most hunts fail.

We take the prey's perspective to see how they survive a world of sharp claws, snapping teeth and slicing talons. Gazelles are finely honed running machines with the stamina to outrun a cheetah, the world's fastest terrestrial animal – in short sprints. If the gazelle escapes the first dash, the cheetah can't sustain a long chase. In the New World, pronghorn antelopes are just as fast – which seems excessive, but pronghorns evolved to outrun American cheetahs, now extinct.

The peregrine falcon dives at 300 kph and surely nothing can escape. But starlings or shorebirds form huge flocks and perform mesmerizing aerial displays – murmurations. Singling out one target is almost impossible.

Insects are tiny but far from defenseless. *Lonomia* moth caterpillars have venomous hairs so powerful they've even killed humans. Some bugs imitate something much more fierce. One lantern bug mimics an alligator, and the *Hemeroplanes* hawkmoth caterpillar accurately mimics a deadly pit viper. Moon moths have long tails with twisting paddles at the end that scramble the bat's sonar so they can fly under the radar ... all tricks keeping prey animals one step ahead of their predators.

A CHEETAH'S PRIDE

Filmed and directed by **Hansa Winshaw**
Executive producers: **Andrea Gastgeb, Sabine Holzer**
3 x 50 min., 4K, 5.1 + Stereo

A never-seen-before wildlife phenomenon is happening in the Samara Karoo Reserve on the plains of South Africa's semi-desert wilderness: the appearance of an extraordinary cheetah family: Two mothers, with nine cubs!

In June, 2020, two cheetah mothers met by chance. One is an experienced mother and effective huntress with five cubs. The other mother has four cubs, but she's younger and hindered by a blind eye, but affectionate and patient. After the initial meeting, the cubs become mixed up, resulting in one mother adopting the other's cubs as her own. Stranger still; the mothers meet again and, instead of going their separate ways, stay together. Female cheetahs are solitary, this hybrid-family is a world first.

The family would go on to endure what can only be described as a wildlife soap opera. They face the many dangers of the African bush, endure starvation and injury, overcome abandonment and loss, cubs rise to insurmountable challenges and look out for one another. One mother struggles while the other succeeds, but they need each other if they're to keep all nine cubs alive.

A co-production of Terra Mater Studios and African Film Company in association with Samara Karoo Reserve

ALIVE!

Executive producers: **Sabine Holzer, Walter Köhler**
7x50min., 4K, 5.1 + Stereo

What does it mean to be ALIVE? Life goes on all around us – but have you ever asked how? What makes life tick?

A cheetah runs down a gazelle in a dramatic high-speed chase. A spectacular yet familiar moment in natural history. It's impressive – but it's beyond belief when we see it from the perspective of this aground-breaking new series ... when we deconstruct it in both scale and time ... to reveal life's essential ingredients!

The latest science has uncovered amazing new insights into how life works and where it came from – about what it really means to be alive. This series takes us on a rollercoaster ride from big, spectacular natural history events to dramatic new images from within living cells, from monkeys to molecules, and through three and a half billion years of extraordinary moments on Earth to reveal the secrets of life.

In seven programs, using the most innovative technology and camera techniques, input from cutting-edge science and the skills of the world's great storytellers, we'll show how life on this planet is nothing short of a miracle.

You'll never look at nature – or yourself – in the same way again.

A production of Terra Mater Studios

ALL YOU NEED IS LOVE

Written and produced by **Ruth Berry and Susanne Lummer**
Executive producers: **Sabine Holzer, Walter Köhler**
1x50 min., 4K, 5.1 + Stereo

Male – female. Man – woman. Mother – father. Simple, right?

Maybe not. In nature, gender is fluid, roles can be reversed, and homosexual behaviour is common. As they say on social media, “it’s complicated”.

By exploring the natural world, we challenge the widespread view that men are men, women are women, mothers are the child-rearers and gender is fixed at birth.

One common idea is that females look after the young and males are there just to fertilise their eggs. Yet many birds don’t fit this family structure. Male cassowaries guard the nest once the female has laid the eggs, and then raise the chicks as a single father. Seahorses are even famous for their males being ‘pregnant’.

But surely gender is fixed at birth? Not necessarily. There are many cases where an animal changes sex during its life. Clownfish live in small groups on their sea anemone. The biggest fish is the breeding female and the next biggest is the breeding male. All clownfish are born male and only become female when they become the dominant fish on their anemone.

And the great taboo – homosexual behaviour? It likely evolved very early in evolution and is one of the most ancient behaviours – an integral part of the evolution of life. As soon as sex evolved, animals just mated indiscriminately with either sex – ‘cheaper’ than evolving complex ways to distinguish the sexes – that came later. It’s not really aberrant behaviour at all – nothing could be more natural.

A production of Terra Mater Studios

AMERICAN AMAZON

Written and produced by **Eric Bendick and Thomas Winston**
Executive producers: **Ivo Filatsch, Sabine Holzer**
2 x 50 min., 4K, 5.1 + Stereo

This is a journey into the last secret wilderness in North America.

An ancient bastion of life anchored in place by two-thousand-year-old cypress trees. A labyrinth of flooded forests and pulsing arteries. A place buzzing with new stories: from the mass migration of the world's only social raptor, the swallow-tailed kite, to the dazzling spectacle of the ghost orchid and its surprising nocturnal pollinators.

A world where big mysteries still tread around every corner of the swamp: the cryptic behavior of the American black bear, the silent footsteps of the Florida panther. Tales bubbling up from crystalline springs and emerging out of serpentine blackwater rivers: the playful chatter of river otters, the heavy splashes of Gulf sturgeon, and the deep bellows of the American alligator.

Here, in the wet and wild American South, among the last stands of cypress, tupelo, strap ferns, pitcher plants, and

epiphytes, is what E.O. Wilson called "America's Amazon" – a hotspot of biodiversity rivaling anywhere on Earth – and yet somehow its story has never been told.

This is not a world where life comes easy. Flooded by epic tropical rains. Ravaged by intense wildfires. Locked in time by rare freeze events. This kingdom absorbs every extreme, and yet, like the delicate resurrection fern, always springs back to life.

A co-production of The WNET Group and Terra Mater Studios in association with PBS and CPB produced by Grizzly Creek Films

CREATURE CULTURE

Executive producers: **Sabine Holzer, Walter Köhler**
3 x 50 mins, 4K, 5.1 + Stereo

We often think of “culture” as uniquely human but that this really isn’t the case.

We’ve known for some time that primates have a shared culture but are beginning to understand how widespread it is throughout the animal kingdom. We should no longer ask whether animals have culture – they do. So, are humans different from other animals?

What do we mean by “culture”? In this series, we refer to the sharing and passing on of learned behaviours. Culture existed long before us humans and is certainly not unique to *Homo sapiens*. New research shows that cultural heritage can be a driving evolutionary factor throughout the animal kingdom, just like genetic heritage.

EPISODE 1: WE ARE NOT ALONE

What is culture and how can it be understood among animals? We define the concept of culture and show how we can find it everywhere in the animal kingdom, not just in humans or great apes – it’s widespread among countless vertebrates, and even invertebrates. Fruit flies warn each other if parasitic wasps are nearby, and meerkats use something like initiation rites.

EPISODE 2: SING WITH ME

Sparrows were among the first animals to be recognised as having culture by scientists, nearly 60 years ago. They sing with regional dialects that even change over time. Humpback whales are famous for their songs, the meaning of which we still don’t fully understand.

EPISODE 3: USING TOOLS

It’s been known for some time that primates not only use tools but pass on the skills to others. And like humans, different families have different customs. In Australia, bottlenose dolphins wear sea sponges on their snouts while they rummage around the coral and seabed to stir up the fish they eat.

DEGREES OF LIFE

Written and directed by **Matt Hamilton**
Executive producers: **Sabine Holzer, Walter Köhler**
6 x 50 min., 4K, 5.1 + Stereo

Prepare to discover Planet Earth like never before! This strongly conceptual, visually stunning six-part series follows the world's most iconic and charismatic species as they battle for life beneath immense external forces.

Take a look at a globe. Bands of green, rust and white circle around it. Lush jungles, lonely deserts, seasonal forests, winter wonderlands; ever wondered why these different realms exist in fixed stripes around the Earth? Told through the eyes of the iconic creatures that call these places home, we follow the changing power of the sun between equator and pole as it binds all life on our planet.

Between equator and pole lie 90 degrees of latitude. As we head north and south from the equator at 0°, the sun's intensity changes, driving patterns of wind, rain and seasonal variation that shape the world's great biomes.

It is no coincidence that desert prevails at 30°, or boreal forest at 60°.

Modern drone, timelapse and moving camera techniques allow us to bring these processes to life, revealing the planet as a living, breathing organism over the course of six episodes.

When used alongside breathtaking behavioural sequences, the series will bring an immersive experience and fresh feel to natural history television.

What makes this series stand out? Spectacular imagery and behaviour. Immersive, conceptual storytelling. Our animal characters are but players on a cosmic stage, their fates bound by elemental forces ruled over by the sun. Change comes in seconds or years. Fire, flood, snow and ice bring drama, conflict and co-operation. The struggle for life is bound not by country or continent, but by degrees of latitude: the degrees of life.

DETHRONED

Produced and directed by **Aaron Gekoski and Will Foster-Gundy**
Executive producers: **Susanne Lummer, Sabine Holzer**
1 x 50 min., 4K, 5.1 + Stereo

There is a connection to big cats that runs deep within us. Throughout the history of Mankind, we have looked upon them with awe, wonder, reverence and respect.

Worshipped by the ancients, witnessed as gods – symbols of power so mighty they commanded the construction of our most impressive monuments – big cats arguably mean more to humanity than any other animal.

DETHRONED is a story of rediscovery, following photojournalist Aaron Gekoski across our planet in an attempt to uncover where we have parted ways with the big cats and what could happen if we continue to allow these great creatures to be traded, commodified and enslaved, to serve the purposes of humanity.

We begin in the jungles of Peru, one of the last great bastions of South America's biggest cat, the jaguar. What follows is a story through time and space, crossing continents to come face to face with lions, tigers, and leopards. Aaron infiltrates a group of Pakistani aristocracy who, have begun buying up big cats to keep as house pets.

In South Africa, he heads deep into the dark heart of the lion breeding industry. He treks the foothills of the Himalayas on the hunt for a man-eating leopard, exposes a tiger petting zoo and circus ring in Thailand, and has his life threatened in the Golden Triangle attempting to document the multi-million-dollar trade in big cats for traditional medicine.

DETHRONED asks us to not only consider our own relationship with big cats, but also to contemplate what becomes of humanity if we continue to destroy all that is sacred.

A co-production of Terra Mater Studios and Four Corners Film & Photography in association with Four Paws

THE DIRTY DOZEN

Executive producers: **Sabine Holzer, Walter Köhler**
12 x 30 min., 4K, 5.1 + Stereo

We like our world to be ultra-clean, trying to banish all dirt ... but in nature, dirt – soil, mud and dung – provide a very good living. We'll meet twelve creatures that thrive in dirt and see how vital they are to the planet's functioning.

Wild pigs create wallows of sticky mud, and many other creatures depend on these pig ponds, and the constant rooting of pig snouts through forest dirt crucially rotavates the soil.

Without earthworms, agriculture would collapse – they eat dirt and aerate the soil ... We'll meet the world's largest worm – the 3 metre long giant Australian Gippsland earthworm.

The rich, thick mud of estuaries supports flocks of shorebirds that follow the receding tide. Growing out of rich mud, tropical mangrove swamps are so diverse they rival rainforests. Here, mudskippers dig burrows and skip over the mud at low tide in extravagant leaping displays.

The world is full of shit – but dung beetles swarm to fresh dung, rolling it away to bury. Without them we'd be up to our knees in shit – as happened in Australia. Native dung beetles couldn't process dung from vast herds of cows, so dung lay thick on the ground, breeding millions of flies – only solved by introducing African dung beetles.

A production of Terra Mater Studios

EUROPE'S AMAZON

Written and directed by **Szabolcs Mosonyi**
Executive producers: **Andrea Gastgeb, Sabine Holzer**
2 x 50 min., 4K, 5.1 + Stereo

Everyone knows the Danube. But do you know its major tributary, leading from White Summits towards the Black Sea?

Where Drava and Danube meet, we encounter Central Europe's most spectacular inland delta; a secret realm of wetland forests, oxbows and floodplains, ever-shifting channels, islands and swamps vibrant with a stunning diversity of plant and animal life.

It gathers all the waters and rich sediments from a vast catchment area of countless ridges, slopes and valleys south of the Continental Divide and east of the Adriatic basin, featuring glaciers, snowy summits, a legion of lakes, widespread woodlands covering mountainsides and valleys and rolling green foothills – before these waters spill into the mighty Danube and end up in the Black Sea.

While **Episode I** portrays a bright, cold world in the midst of the very clouds that feed the river system, **Episode II** reveals an entirely different world of flooded broadleaf forests roamed by herds of red deer, of swamps and gravel banks inviting plovers and terns to breed and raise their young, of beaver lakes covered by wild water lilies and alive with fish, amphibians and turtles under giant willows with colonies of water-fowl – a wetland world vying with Brazil's Amazon or Florida's Everglades.

The makers of this film have grown up, lived and worked along this still secret gem of river. Being familiar with some of the great rivers of the planet, including the Amazon, the comparison they draw reveals the Drava's unique and fascinating character and uncovers many of its hidden treasures.

A production of Terra Mater Studios

EUROPE'S BADLANDS

Executive producers: **Sabine Holzer, Walter Köhler**
3 x 50 min., 4K, 5.1 + Stereo

The word 'desert' causes most people to think of the Sahara or the Gobi: vast sand dunes that cover large areas of countries and continents.

Inhospitable stony deserts like Death Valley or Australia's outback might come to mind – but the world's deserts are not limited to Africa, Asia, America and Australia! Europe's deserts are remarkable because of their unusual history, characteristics or geographic locations in Spain, Italy, in the Highlands of Iceland or on the volcanic island of Fuerteventura. There are tiny deserts in Sweden and Norway, and large ones in Poland, Serbia and Ukraine. They all continue to expand, and their growth is being exacerbated by climate change.

Spain's Tabernas Desert is often compared to the Badlands of North America. It is an inhospitable, sparse world created by centuries of low precipitation, extreme heat and strong wind erosion. The animals and plants that live here are specialists that have learned to survive despite the meagre resources. Meanwhile, wild cats and foxes roam the **Bardenas Reales** semi-desert in northern Spain. Little apart from saltwort grows on 400 square kilometres of sparse soil, and great bustards frequently fall prey to eagles and vultures. **The Highlands of Iceland** are an extensive

stony volcanic plateau interrupted by shimmering green oases of grass. At first glance, the area seems completely uninhabited, and heavy rainfalls, sandstorms and blizzards can occur anytime during the year. However, the desertification here is a result of human animal farming, rather than drought. The Highlands of Iceland are now the hunting grounds of arctic foxes, the island's original inhabitants.

In three episodes, we take a look at Europe's deserts – their present, but also their future.

EUROPE'S WILD BORDERS

Written and directed by **Harald Pokieser**
Executive producers: **Sabine Holzer, Walter Köhler**
4 x 50 mins., 4K, 5.1 + Stereo

Raging oceans. Towering snow-capped mountains. Dense, mysterious forests. They all mark Europe's wild borders. These wild regions are home to wolves, bears, ospreys, sperm whales and penguins. In addition – and somewhat unexpectedly – Europe also contains the world's second-largest coral reef, vast lagoons, sea cows, green sea turtles and reef sharks.

The search for Europe's borders reaches from the Ural Mountains to the South Pacific and beyond, to the Antarctic. The term „Europe“ is by no means easily defined: Is it only the European mainland, or do the islands off the coasts count, too?

Is „Europe“ determined by geographical borders, or do political ones that include overseas territories count as well? In four visually stunning episodes, this blue-chip documentary series takes an open-minded approach, looking for answers wherever the adventurous journey to the remotest, wildest areas of Europe leads.

We take the viewer on a compelling journey around the outer edges of Europe, capturing the fascinating wildlife and spectacular landscapes of the border regions while exploring one apparently simple question: Where does Europe really begin, and where does it end?

A production of Terra Mater Studios

© gettyimages

FUTURE HOME SURVIVING OUR EXTREME PLANET

Written and directed by **Andy Byatt**
Executive producers: **Sabine Holzer, Walter Köhler**
4 x 50 min., 4K, 5.1 + Stereo

From devastating natural disasters to cities choking on toxic fumes, humanities' homes are under threat.

Survivors of natural disasters bear painful testimony to the consequences of getting it wrong.

Based on pioneering research and designs, FUTURE HOME: SURVIVING OUR EXTREME PLANET is the first series to explore stunning new structures designed by a diverse range of architects to withstand mother nature's most powerful forces: flood, fire, ice, wind, quakes, air.

Wildfire smoke reached the North Pole for the first time in recorded history. Megastorms are on the rise. Melting Permafrost threatens to release carbon dioxide 25 times as potent as current greenhouse gases. Worldwide, more deaths are now attributed to air pollution than to car accidents. Earthquakes left over 100,000 people homeless around the world in 2021. Meeting these forces in safe homes is crucial, and everyone needs to be able to access them – so we will feature high-tech and low-tech solutions, suiting different wants and needs.

This 4-part series takes viewers on a spectacular journey from the aridest deserts, to frozen wastelands, and deep into the belly of our urban jungles, and we will meet those working against the odds, designing the sustainable projects that will protect us from an unrecognizable Earth.

This series serves as a love letter to the wondrous planet we live on, transporting our audience through breath-taking landscapes, within terrifying weather systems, and deep into the vibrant cultures of the peoples of Planet Earth. While FUTURE HOME will uncover how we are redesigning the way we live as the planet rapidly changes around us, the real question is – can we adapt in time?

A Terra Mater Studios and Amberjack Films production

GAME OF MOONS A TALE OF ICE AND FIRE

Written and produced by **Ivo Filatsch**
Executive producers: **Sabine Holzer, Walter Köhler**
3 x 50 min., 4K, 5.1 + Stereo

Everyone knows the Moon – our Moon. Up till now, it is the only other celestial body besides Earth humans have set foot on. But the companion of our planet is by far not the only moon in the solar system.

It's probably the most prominent object in the night sky and has fascinated humans since the dawn of mankind, sparking legends, tales and myths, but also research and science all around the world.

All in all, there are more than 200 of these natural satellites orbiting other planets in the solar system, and even much smaller asteroids. All these moons are incredibly different regarding their size, but also in terms of their environments.

Studying these alien worlds in detail, scientists are getting a better understanding not only of the solar system, but of our world as a whole. And the better we understand our neighbourhood, the better we can take care of our home planet.

This three-part series is a visual, substantial and emotional rollercoaster ride through the solar system – exciting, entertaining, elaborate. It shows widely unknown foreign

worlds of extremes in our celestial neighbourhood, each single one amazing, fascinating, and unique.

A production of Terra Mater Studios

HEALTHY CITIES MORE THAN HUMAN

Written and directed by **Heiko De Groot**
Executive producers: **Susanne Lummer, Sabine Holzer**
2 x 50 min. + 1 x 90 min., 4K, 5.1 + Stereo

Cities are like living organisms. Healthy and in perfect balance they can make their inhabitants happy, humans just as well as animals and plants. Thrown off balance, they get sick – and with them all the creatures living here.

Growing numbers of people and a capital investment boom are leading to a tremendous loss of green spaces, increased sealing of soils and a higher population density. The well-being of many cities is under threat.

The prevailing opinion is that cities belong to the people and that “nature” is the place for animals. We tend to forget that we have long since turned the countryside into an agricultural desert. What’s more, we urgently need to protect whatever remains of “nature” in our cities. What are the consequences of rapid urbanisation for biodiversity, cities’ ecosystems and people’s health?

We set off into the world of animals that have escaped to the city and tell their stories. These animals have adapted over time. Blackbirds sing louder and earlier in the morning to brave rush hour; urban foxes have grown shorter snouts

for they no longer use them to catch mice but tear open plastic packaging. White-footed mice in New York can now digest fast food instead of whole grains.

Intriguing behavioural animal stories, sublime city shots and the exciting projects of proficient scientists will reveal amazing connections in an attractive and entertaining way and give us a new look at life in our cities.

A production of Terra Mater Studios and federvieh in association with NDR/ARTE

HOLDING MY BREATH

Produced and directed by **Rick Rosenthal and Katya Shirokow**
Executive producers: **Andrea Gastgeb, Sabine Holzer**
1 x 52 min., HD, 5.1 + Stereo

**What does it take to find the ocean's most impressive animals and capture their behavior on camera?
How does one even know where to look for them in the big blue?**

Join 4-time Emmy Award-winning filmmaker and marine biologist Rick Rosenthal behind the scenes filming whales, dolphins, giant tunas, billfishes and manta rays, and discover his secrets for “getting the shot”.

For decades, Rick has filmed in the ocean waters out of sight of land, in waters thousands of meters deep – the open ocean. It's a world that feels like deep space, where hours and days can pass with no signs of life in the sea or sky. Then, in minutes, the seas explode into life with a massive

shoal of baitfish swirling just below the surface, attacked by dolphins and tunas torpedoing through, while seabirds dive-bomb from above. Without warning, out of the deep, a whale sweeps through the middle of the panicked shoal – its massive mouth swallowing thousands of the baitfish in a single mouthful.

Capturing such intense moments of action in the open ocean requires experience, patience and often, holding one's breath. Most open ocean animals perceive scuba divers' bubbles as a threat and disappear when approached.

To get close enough to film some of its most charismatic inhabitants, Rick and his open ocean camera-team often forgo their scuba tanks. Instead, they hold their breath – sometimes for minutes on end.

In **HOLDING MY BREATH**, we explore these and other back-stories of some of the most memorable natural history moments captured on camera by Rick and his team, most of which involved not breathing.

A co-production of Terra Mater Studios and Wild Logic LLC

ICON UNCOVERING THE SOUL OF SHERE KHAN

Executive producers: **Sabine Holzer, Walter Köhler**
3x50 min., 4K, 5.1 + Stereo

Narrated by Idris Elba

Tigers are one of the most elusive apex predators on the planet, and this series aims to unravel the many unknowns about them. By exploring the natural world of these big cats as well as their historical and cultural impact, 'ICON' reveals extraordinary stories that create a greater understanding of the species.

This three-part series is part cinematic drama, part scientific investigation, and part blue chip natural history documentary, all woven together with a heart-led sensitivity to how tigers have left their mark on our planet. We immerse ourselves in

all aspects of the tigers' world, including the good, the bad, and the difficult.

In each hour-long episode, we will focus on specific tiger subspecies in the wild and unlock similarities between different types of tigers while also marveling at their unique geographical adaptations to their specific environments. These natural history stories will be interwoven with historical tales with important messages. Stories which have to be told now, as Tom Gray, the Tiger Scientist for WWF's Tigers Alive Initiative, explains: "While

Tigers might be omnipresent across our cultural landscape, their actual existence in the wild is reduced to a few pockets of their historical range. Wild tigers are found in just 10 countries, their historical range shrunk by over 95 %."

This spectacular series debunks and demystifies one of the world's most revered and feared apex predators on the planet.

A production of Terra Mater Studios and Think Lemonade Productions

JAGUAR BEACH

A film by **Ann Prum, Doug Shultz, Brian Moghari and Filipe DeAndrade**
Executive producers: **Ivo Filatsch, Sabine Holzer**
1x50 min., 4K, 5.1 + Stereo

Where the king of the jungle becomes the king of the beach.

On a remote stretch of Central America's Pacific coast, far from tourist beaches, there is a unique dry tropical forest, the last of its kind on the planet.

Over 500 species of birds, wild pumas and ocelots, monkeys and 100 species of reptiles all make their home in this remote coastal oasis. And at the top of the food chain reigns the healthiest population of jaguars in Central America. We've only recently discovered why.

Here, on one isolated beach, the local jaguars have learned that there is more to eat than what's found in the forest. Under cover of night, these cunning cats slip out of the trees and onto the sand to stalk a surprising victim: sea turtles.

In cinematic blue-chip style, we'll follow several individual jaguars over the course of eighteen months, capturing their complex lives as they navigate this unique environment between forest and beach, hunting sea turtles, mating, rearing their young and battling for territory.

Through startlingly close and intimate filming with these cats, we'll transport audiences to a never-before-seen place where two worlds – the dry tropical forest and Central America's rich marine seascape – collide in a spectacular battle for survival.

For the first time, we'll tell this previously unknown story, how the lives of two of the world's most beloved species – the jaguar and the sea turtle – meet with spectacular consequences for everyone on 'Jaguar Beach'.

A production of Terra Mater Studios and Coneflower Films Studios in co-production with
The WNET Group in association with PBS and CPB and Tangled Bank Studios

KATAVI

Written and directed by **Owen Prümm**
Executive producers: **Sabine Holzer, Walter Köhler**
3 x 50 min. + 1 x 90 min., 4K, 5.1 + Stereo

An extreme weather phenomenon strikes remote, inaccessible Katavi National Park in Southern Tanzania. The powerful local tribes of hippo, lion and crocodile struggle for survival while defending their turf from intruders. This allegorical tale offers a fascinating insight into how an animal society can be affected by a changing climate and how this situation requires new strategies and changed behaviors from everyone.

In the secluded world of Katavi National Park, this documentary feature captures a once-in-a-lifetime event: during a very special year, a severe drought and flood due to a 90-year cyclic change in climate makes life increasingly difficult over the course of the seasons.

During the normal rainy season, Katavi flourishes. Babies are born and life is bountiful. But the dry season develops into an

extreme drought, until the last water holes dwindle into dark mud pools in which the residential hippos, lions and crocodiles are forced together, fighting for the last drop.

In stark contrast, the rainy season that follows the extended drought brings flooding to the region, creating havoc, cutting off members of the lion pride from each other, leaving them vulnerable.

The filmmakers lead the audience into an intimate drama that unfolds between these powerful clans over the most extreme year of our characters' lives. Our characters' plight to overcome lean and dark times is governed by the wisdom of generations. It ultimately weaves a message of tolerance, flexibility, and hope. A deeply resonant lesson we can all learn from, and one that has governed Katavi since time immemorial ...

Produced by Terra Mater Studios and Shibumi Films

KOSHA

SECRET LIFE OF A PANGOLIN

Written by **Ruth Berry**
Directed by **Bruce Young and Wayne De Lange**
Executive producers: **Susanne Lummer, Sabine Holzer**
1x 50 min., 4K, 5.1 + Stereo

She is a small, harmless, scaly, ant-eating mammal with a ridiculously long tongue ... and no teeth. Her name is Kosha, and this is her story.

Kosha is an orphaned Temminck's ground pangolin from Zimbabwe, rescued from poachers when she was a pup, raised by caring humans and released back into the wild. Now fully grown, she offers her carers a rare glimpse into her secret life, when she takes them on an unexpected adventure down the pangolin burrow! What they learn along the way will jettison many existing theories about pangolin behaviour and biology. And help other rescued pangolins – the most trafficked mammals in the world – find a new home in Nature.

Kosha will give zoologist Ellen Connelly, conservationist Lisa Hywood and pangolin minder Luka Kamuhuni, the inspiration they need to change the fortunes of disadvantaged scaly anteaters across Africa.

Kosha motivates Ellen Connelly to trust in the simple process of observation. By watching Kosha over many years, she will gain an incredible foundation to learn

more about pangolins without interfering in their lives. Kosha gives Lisa Hywood the evidence to prove her animal rescue team in Zimbabwe have the specialist skills to rehabilitate pangolins seized from the illegal wildlife trade – and to bring new and improved ways to conserve pangolins.

And Kosha opens the door to a better life for local Shona man Luka Kamuhuni. Luka's connection to the little animal inspires him to learn about the pangolin's essential role Zimbabwe's biodiversity and to pass that message on to his people.

This is an uplifting story about the life of a little-known, highly endangered creature – with as many twists and turns as a pangolin's burrow.

A Silver Bullet Films / Terra Mater Studios production

KUI BURI RECREATING PARADISE

Written and directed by **Heinz Leger**
Executive producers: **Ivo Filatsch, Sabine Holzer**
1x50 min., 4K, 5.1 + Stereo

There is a place in Southwestern Thailand that holds a secret.

The dense jungles of *Kui Buri National Park* seem a natural paradise. Here, some 300 wild Asian elephants are thriving – but this was only possible thanks to a special initiative that turned the long-time agricultural area of Kui Buri back into a Garden of Eden. Alongside the elephants lives a vast number of animal species, like gibbons, wild dogs, and hornbills. For these remarkable birds, special conservation efforts have been made: instead of natural tree holes, whose numbers are decreasing due to deforestation, scientists have tested old wine barrels as replacements for the hornbill's nesting – with surprising success.

Moreover, Kui Buri is home to a mysterious creature, which the locals call *Krathing Daeng*. It's an extremely rare natural hybrid – a caprice of nature, created through the mating of two different bovine species: the *gaur*, the world's largest bovine, and the *banteng*, a smaller, more reddish species. In addition, there are sambar deer, and the Malayan tapir, the largest of all the subspecies – and the only one that lives in Southeast Asia. With all its bounty of species, *Kui Buri* is a true success story; it's become sort of a role model for national parks.

LEMUR DIARIES

SURVIVING THE MODERN WORLD

Executive producers: **Cayley Christos, Sabine Holzer**
3 x 50 min., 4K, 5.1 + Stereo

They hibernate underground, dance, play hide-and-seek and even get high. Lemurs are so much more than the ring-tailed critters we have come to know and love. Today, their lives are filled with unique challenges, new adaptations and an uncertain future.

LEMUR DIARIES is an enthralling 3-part series that delves into the captivating world of lemurs, presenting their extraordinary lives from their very own perspective. With an endearing and humorous touch, this series takes viewers on an emotional journey like no other. Experience their authentic firsthand encounters, as LEMUR DIARIES unveils their captivating tales that unfold in their remarkable lives.

EPISODE 1

"Family Bonds" delves into the intricate social structures of lemurs. From the Northeast to the Southern landscapes of Madagascar, we witness how family dynamics, alliances, unique communication methods and hierarchical relationships contribute to their survival in the face of changing circumstances.

EPISODE 2

"Masters of Survival" uncovers the ingenious survival strategies lemurs employ across regions. Whether it's resourceful foraging, unique hunting techniques, or shelter-building, we explore how these adaptations enable lemurs to conquer the challenges presented by their ever-evolving environment.

EPISODE 3

"Harmony in Nature" focuses on lemurs' pivotal role in maintaining the delicate balance of Madagascar's diverse ecosystems. We showcase how lemurs' feeding habits inadvertently aid in seed dispersal and forest regeneration, and the importance of human involvement in ensuring the survival of these remarkable creatures and their habitat.

MARA: REBIRTH

A film by **Dereck and Beverly Joubert**
Executive producers: **Sabine Holzer, Ivo Filatsch**
1 x 52 min., 4K, 5.1 + Stereo

MARA: REBIRTH looks at one of the most covered and well-known ecosystems in natural history, but dives deeper into a side of it that is almost never seen. What happens when the wildebeest migration leaves?

Our film starts with the dust of the disappearing migration as it heads off across the river and turns its face back to what is left. And that is something quite incredible. The real value of wildebeest of what they leave behind is in millions of tons of fertilizer that turns the grass into one of the richest landscapes on the planet.

And the best part is that for nine months, no wildebeest herds return.

Leopard cubs, jackal pups, elephant calves, young giraffes and zebra foals – they all give the story a latent sense of joy and fun, a celebration of nature that is not clichéd or reliant here on a migration and the usual crocodilian frenzy. Ours is a story of life, not death, of birth and growth, of the richness of a landscape that takes your breath away each dawn and gives it back again in meditation each evening.

Birth is one of the two things that is common to all of us around the planet. Our film is a lyrical but factual look into what happens most of the year in the Mara, and it is a journey. We hope you can join us.

A co-production of Terra Mater Studios and Wildlife Films

NATURE'S BLUEPRINTS

Executive producers: **Sabine Holzer, Walter Köhler**
3 x 50 min., 4K, 5.1 + Stereo

Turn on the national or international news and it seems that our planet is facing overwhelming problems.

Record-breaking floods devastate some parts of the world while others suffer unprecedented droughts. Waste material clogs rivers and threatens ocean life. We're running short on energy and most of the energy we produce makes things worse by releasing carbon dioxide. Technological fixes haven't worked. We need a different approach!

Luckily for our future survival, nature's research and development department has been operating for three and a half billion years. In that time, it has solved all the

problems we now face and hasn't killed the planet in the process!

This series investigates the concept of biomimicry – exploring nature's blueprints to solve problems. We explore three areas, challenges that we must overcome urgently, if we're to reduce our impact on our own home planet: how to move around, how to create materials without trashing the environment and how to generate and use energy without compounding climate change.

We see developments in robotics creating robots that can explore environments that we can't, and have implications for new developments in medicine with prosthetic limbs. We investigate new materials that are lighter and stronger, are more flexible when needed. And we discover ways to generate clean energy that don't involve burning fossil fuels and are renewable.

Biomimicry is the science of the future.

A production of Terra Mater Studios

NATURE'S RETURN

A film by **Petra Lederhilger, Susanne Lummer, Andreas Ribarits**
Executive producer: **Sabine Holzer**
1 x 50 min., 4K, 5.1 + Stereo

How is it possible that, in the urban jungle of modern metropolises, young plants none-the-less poke their heads through cracks in the concrete, searching for the sun?

How do the large herds of zebras in the Okavango Delta survive the searing heat of the dry season and hold out for the first drops of rain in months? Can a grizzly bear mother and her four cubs live through North America's harsh winter?

What was the impacts of wolves' return to Yellowstone National Park?

All across the planet, even when faced with apparently impossible conditions, life persists. Despite setbacks, we invariably witness NATURE'S RETURN.

For decades, human beings have had a more dramatic impact on conditions on Earth than any other factor.

The Anthropocene epoch has caused natural systems and networks that have existed for millennia to become unstable – yet nature remains perhaps our greatest hope in this difficult situation. After all, it has spent millions of years adapting to new realities. No matter how great the effects of individual seasons, natural disasters or human influence are on existing ecosystems, nature invariably finds some way to return.
We just have to let it.

A production of Terra Mater Studios

THE NATURE OF CHRISTMAS

Written and directed by **Herbert Ostwald**
Executive producers: **Sabine Holzer, Thomas Weidenbach**
1x50 min., 4K, 5.1 + Stereo

Get ready for an enchanting journey through the natural history of Christmas! We will explore the fascinating connection between animals, plants, and mystical landscapes with this beloved holiday; a connection that has been cherished by many cultures for centuries.

Join us as we uncover the secrets behind the spread of evergreen mistletoe, discover how reindeer survive the frigid winter, and trace the origins of the beloved Christmas tree, joining tree-climbing harvester in dizzying heights. And don't forget social geese, patient donkeys and charming robins, which are also intricately intertwined with this holiday.

This documentary is a feast for the eyes with lavish images that will transport you to magical landscapes, and we've added a touch of humor and adventure to keep things entertaining.

Although Christmas is a Christian holiday, it has become a cultural phenomenon celebrated by people of all backgrounds. It's known as the "Festival of Love", bringing warmth and comfort to the cold winter months – or for those on the other side of the globe, a unique combination of beach parties and Santa hats.

This documentary will take you on a wild journey around the world to explore the fascinating NATURE OF CHRISTMAS. Join us as we discover the true magic behind this beloved holiday!

PANTANAL RIVER OF REFLECTION

A film by **Dereck and Beverly Joubert**
Executive producers: **Sabine Holzer, Walter Köhler**
2 x 50 min., 4K, 5.1 + Stereo

By definition, the Pantanal is “an area of muddy seaside land which is covered with water at high tide.” But this description doesn’t do it all!

The Pantanal has a delta 15 × larger than Botswana’s Okavango, and is as beautiful – minus the elephants, and certainly not a muddy swamp. This film will bring a fresh set of eyes to one of the most amazing landscapes on the planet, in association with one of the most important conservation groups in Brazil, Instituto Homem Pantaneiro, run by Colonel Angel Rabelo. They are granting access to unique, and exclusive reserves along the Amalor mountain range on the border of Bolivia.

Pink ipê trees flush in July covering whole hills in bright colours, but not enough to disguise the flashes of red and green macaws or Amazon kingfishers. The range of “weird” animals is extraordinary, from piranhas to capybara, maned wolves, ocelot, giant otters, toucans, jaguars – they all make up the cast of characters, each telling the story of this place. We may look into the parallel species to those in Africa and reveal why so many are so similar.

A co-production of Terra Mater Studios and Wildlife Films

PENGUIN BAYWATCH

Written by **Bertrand Loyer**
Directed by **Kevin Peyrusse and Marta Sostres**
Executive producers: **Sabine Holzer, Bertrand Loyer**
3 x 60 min., 4K, 5.1 + Stereo

Welcome to the Crozet archipelago, a unique penguin paradise!

Penguins are charismatic and funny characters. They always look as though they are ready to go out to a fancy dinner. And while they are clumsy on the ground, they are extremely graceful in the water.

Their neighbours on the beach are often naturally clumsy and grotesque as well: elephant seals look like gigantic bean bags when they leave the ocean to mate, give birth and moult. But while the elephant seal population is rising, king penguin numbers are decreasing rapidly. What is killing them?

Despite its humorous approach, the series relies on hard facts and serious science: telemetry data provides fascinating facts and the investigation raises puzzling questions. How deep and how long can a king penguin or an elephant seal actually dive? Why are elephant seal numbers rising, but penguin numbers are not? How and why do gigantic orcas eat small fluffy penguins? Can a penguin catch bird flu?

There is a dramatic plot behind this wildlife comedy, a mystery to be solved. Like an Agatha Christie novel, each episode, each chapter brings clues to light ...

To delve into the lives of penguins and their invasive neighbors, a new generation of talented film makers and divers is committed to spending extensive periods of time with them in their remote and hostile environment using the most advanced tools in 4K HDR cinematography.

A co-production of Saint Thomas productions and Terra Mater Studios and Ushuaia TV

THE PHILIPPINES ISLANDS ON THE EDGE

Executive producers: **Roman Landauer, Sabine Holzer, Walter Köhler**
2 x 50 min., 4K, 5.1 + Stereo

The Philippines – a group of more than 7,000 islands close to the equator, straddling the unstable volcanic Ring of Fire. The islands' tropical rainforests are teeming with life, in all its plenty and variety.

PART I: ABUNDANCE

The rich habitats across the Philippines provide for huge numbers of plants and animals. Fertile volcanic soil supports rich, lush rainforest, where the massive Philippine eagle hunts monkeys, reptiles and flying squirrels; where Colugos – nocturnal flying lemurs – search for food in the canopy; and tiny, big-eyed tarsiers live in the lower branches. The shallow seas between the islands support some of the richest marine life on the planet, with deep cave systems and coral reefs, where green sea turtles breed, sharks set up nurseries in underwater caves and pygmy seahorses hide among the coral branches. Many of the islands are unexplored, and, untouched by humans, the wildlife thrives here.

PART II: DIVERSITY

New species are forming on these isolated islands, while volcanic activity isolates populations, eventually creating further species. The area around the limestone caves attracts an incredible variety of birds and the region also supports around 1,000 different plant species. And in the islands' mysterious forests, new endemic species are still being discovered.

The Philippines have huge numbers of endemic species, yet already some are on the IUCN's Red List. Habitat destruction and inevitable sea level rises caused by climate change will have far-reaching effects on the people, flora and fauna. How will they survive the rapid and dramatic changes facing this country of mysterious islands?

PLANET OF PARKS

Executive Producers: **Sabine Holzer, Walter Köhler**
5 x 50 min, 4K, 5.1 + Stereo

The nature just outside the front door – during the pandemic, city dwellers came to realise how valuable parks can be.

Green oases in the heart of the metropolises helped us in difficult times. When we couldn't travel and restaurants were closed, the local city park provided a green sanctuary and the picnic in the park became a crucial escape.

The city park as a nature reserve – since the parks were created, animals and plants have taken over these green oases in the heart of the big cities. City parks can even become biodiversity hotspots: semi-open landscapes with different plantings, no mass agriculture, and pesticides. And the wild animals quickly get used to joggers.

The returnable series "Urban National Parks" will show what we humans rarely notice. Every park is a complex ecosystem in its own right – the animals are the stars, the plants their stage and the city and people only a backdrop. You will look at your city park with different eyes.

Featured parks include: Central Park (New York), Prater (Vienna), Royal Botanical Gardens (Melbourne), Stanley Park (Vancouver), Lumpini Park (Bangkok)

A production of Terra Mater Studios

QUEST FOR THE CROCODILE CALLERS

Presented by **Aaron Gekoski**
A film **Will Foster-Grundy and Damian Antochewicz**
Executive producers: **Susanne Lummer, Sabine Holzer**
1x50 min., 4K, 5.1 + Stereo

In a land lost in time, mystery and mythology prevail. Timor-Leste, a country known more for its bloody past than the rich culture and biodiversity found in this now peaceful nation. But for those willing to venture onto Timor's shores, great stories are bound to be found. Indigenous animist beliefs still remain strong – among them the belief in 'Abo Lafaek', Grandfather Crocodile ...

Having spent more than a year documenting the country's underwater wonders, environmental photojournalist Aaron Gekoski is now heading into Timor-Leste's cultural heartland,

on a mission to track down the anointed few with the power to communicate with crocodiles. Known as the crocodile callers, these tribal elders are the last of a dying breed of true Timorese animists. The crocodiles live free but alongside people and are treated as highly respected community elders with ritual offerings for special events.

However, there are problems. Reports of crocodile attacks are on the rise, possibly due to too many dominant crocodiles for the available rivers and estuaries. The crocodile callers believe they can identify crocodile

friend from foe so their ancient skills and wisdom could have a place in the modern day. 'Quest for the Crocodile Callers' will be produced by a team of filmmakers with unique access to one of the least known places on our planet. The documentary will examine the animist cultures that still exist in the backwaters of Timor-Leste and ask the bigger questions about how we humans choose to interact with the natural world in the modern day. Perhaps there is wisdom to be found in what on the surface seem to be defunct and outdated superstitions ...

A production of Terra Mater Studios and Four Corner Film & Photography

RAPTORS

Written and directed by **Matt Hamilton**
Executive producers: **Martin Mészáros, Sabine Holzer**
2 x 50 min., 4K, 5.1 + Stereo

The planet's most successful large predators are a group of birds known as the raptors. United by a hooked beak, set of razor-sharp talons and a taste for flesh, they have conquered the globe. In doing so, they have won both our respect and an obsessive global following.

This two-part series tells the story of the raptor's unparalleled success. From familiar favourites to entirely new characters, we reveal the latest discoveries alongside extraordinary behaviours. We discover how raptors perfect the art of survival, how they adapt to the toughest environments, and what the future holds for these remarkable birds in a rapidly changing world.

From distant lands to stunningly lit studios, this series is an insightful and spectacular celebration of the world's top predators. It's time to see the raptors in a whole new light.

EPISODE 1: MEET THE RAPTORS

Our first episode is a tale from the top of the food chain. We reveal the ways in which raptors have come to dominate the planet, kill for a living and inspire both fear and wonder. Alongside astonishing visuals, insights and behaviours, we even introduce you to the newest, rather surprising, member of the raptors.

EPISODE 2: LIFE AT THE LIMITS

Life as a top predator is not as easy as it seems. Our second episode reveals the astonishing ways in which raptors adapt to the toughest places on the planet. We visit frozen wastes, deadly jungles, baking savannahs and remote, storm-battered isles. We bring stories of drama, tragedy and hope, as the world's top predators battle the odds to survive. Alongside a mix of new and familiar faces, we also consider what the future holds for raptors in a rapidly changing world.

RETURN OF THE LOST LIONS

Written and directed by **Ruth Berry**
Executive producers: **Sabine Holzer, Walter Köhler**
1 x 50 min., 4K, 5.1 + Stereo

This is the story of Florence, a rare West African lion, and how she is bringing back her kind from the edge of extinction in Niokolo-Koba National Park – Senegal's best kept secret.

N iokolo-Koba is bigger than Yellowstone. It is a rare gem, vast enough to be a refuge for many endangered West African animals including a little-known subspecies of lion. There may be as few as 120 West African lions in the wild, but in Niokolo-Koba National Park they have made a miraculous comeback thanks to one lioness, Florence. A decade ago, West African lions were undergoing a catastrophic population collapse. In Niokolo-Koba National

Park only 10 to 15 remained. Poaching was rampant. In response, Senegalese National Parks' staff and NGO Panthera began anti-poaching measures and a project to collar and monitor the lions. Then, Florence came along. In 2023, Florence made international news when rare footage was filmed on a camera trap. She appeared with three lion cubs. For hours they ate from a buffalo carcass and played – as lion cubs do.

Scientists believe she has given birth to three litters – nine cubs in total – in her lifetime. She is now considered the matriarch of Niokolo-Koba. Now, as these lions fill in the landscape, new prides are forming in new areas.

In this precious, little-known place, comes a story of hope, thanks in no small part to Florence, the West African lion.

A production of Terra Mater Studios and Wildberry Productions

RIDDLE IN THE WIND

Directed by **Sacha Bollet & Bertrand Loyer**
Executive producers: **Sabine Holzer, Bertrand Loyer**
2 x 50 min., 4K, 5.1 + Stereo

Something strange is happening, thousands of miles from the nearest landmass, on isolated volcanic islands in the so-called “Roaring Forties”. Certain animals are thriving while others are disappearing for mysterious reasons.

To solve this riddle, mammal and bird specialists set up camp on these rugged islands that are constantly lashed by the southern Indian Ocean lows in order to place an array of tagging devices on penguins, elephant seals, albatrosses, orcas and other large animals. The resulting data reveals a number of unexpected consequences of human activity that affect the birth and survival rates of ocean wanderers. Some scientists propose and implement a range of remedies.

STYLE

Studies of population dynamics can make great television! The recipe is simple: take the rarely filmed but scenic locations of Crozet and Kerguelen islands, focus on charismatic and large animals in a pristine environment, and set up a riddle focussing on their mysteriously dwindling or thriving populations. Next, add some spectacular animal behavior shots filmed with the latest UHD equipment; show scientists as CSI investigators/vets but make sure they only speak off-camera while attaching their hi-tech tags to animals; transform the data into spectacular 3D graphics; reveal a complex set of causes linked to human activity; end on a positive note (to show that there are some remedies for the mess we have created) and finally demonstrate that, with a little bit of care, nature can be resilient.

A co-production of Saint Thomas Productions and Terra Mater Studios

SAME, SAME – BUT DIFFERENT CHILDREN OF THE EVOLUTION

Written and directed by **Ivo Filatsch**
Executive producers: **Sabine Holzer, Walter Köhler**
1 x 50 min, 4K, 5.1 + Stereo

Nature – evolution – has spawned countless creatures. Today, Earth harbours millions of species, from tiny microbes to the largest animal ever to have lived on our planet, the 200 tonne blue whale.

Animals live on land, in the oceans, and in the air – and most species look very different in size, limbs, body shape and appearance. Some of them are closely related – closer than you'd expect. Yet other species look surprisingly alike, with similar or even the same body features, even though they're not even related.

Did you know that the rock hyrax, the size of a cat, looking like a marmot – is related to the elephant, and to manatees? That we humans are related not only to primates, but also to colugos – air-gliding mammals that live in the jungles of Southeast Asia? Oddly, ostriches and crocodiles are also related, as they share the same ancestors: a special group of dinosaurs, called theropods.

At the same time, you'd expect a certain relationship between spiny hedgehogs, echidna and tenrecs. But nope, sorry. Whales and whale sharks? Same story, no relations. Let's not even get started on snakes and eels!

This film presents these and more discoveries in a fresh, entertaining, and yet very informative way. You will meet a lot of fascinating creatures with a wide variety of biological connections to one another – whether it's differences or similarities. And there's one crucial takeaway for everyone: diversity is the most natural thing on Earth.

A production of Terra Mater Studios

THE SECRET SOCIAL LIFE OF REPTILES

Executive producers: **Sabine Holzer, Walter Köhler**
2 x 50 min., 4K, 5.1 + Stereo

'The secret Social Life of Reptiles' is a frightening and eye-opening new three-part wildlife series with unexpected heroes. Through bold stories of the most fearsome reptiles in the wild, we reveal the unexpected social lives of our last prehistoric kingdoms and illuminate how reptiles are the foundation of our social lives today.

Reptiles are assumed to be antisocial animals. Alligators are considered "mindless killers". Snakes represent evil in numerous tales throughout millennia. And the most basic human behavior is called the "reptilian brain".

But recent discoveries have left scientists astonished: a hidden reptilian social network unlike any other; a missing link between humans today and our evolutionary past. Not mindless killers, but collaborative hunters! Not evil, but devoted parents! Not basic instinctual intelligence, but skilled communicators! Not cold-hearted, just ... cold-blooded.

This revolutionary series uncovers how reptiles relay escape plans to one another from inside their eggs, battle over mates to the death, use hidden languages to speak to each other, have secret "dating" profiles – and find intimate connections with one another in the most unexpected ways. Each episode delves into a different core social structures looking at family, alliances, competition and networking abilities that run deep within both reptilian and human society.

Ultimately, through these misunderstood creatures, we reveal that these ancient cold-blooded networks are the source codes that explain how humans built the societies we have today.

A production of Terra Mater Studios and Red Rock Films International

SENTINELS EXPLORING NATURE FROM SPACE

Executive producers: **Sabine Holzer, Walter Köhler**
1x 50 min., 4K, 5.1 + Stereo

Here on the ground, it's hard to appreciate how our planet works, or how truly global some creatures really are. But Earth is ringed by satellites sending images and data from space, and new GPS tags are so tiny they can track individual insects over long distances.

We'll reveal the planet's changes over a year, watching seasonal variations in plant productivity with instruments such as SeaWiFS and MODIS and see changing rainfall patterns as the Intertropical Convergence Zone moves north and south of the equator, bringing seasonal monsoons and a flush of new growth.

Painted lady butterflies migrate north from East Africa to Svalbard. But some journeys are much longer. Short-tailed

shearwaters migrate from Australia to the Bering Straits, following patterns of ocean currents visible from space.

Over the oceans, satellites measure complex patterns in sea surface height reflecting the mountains, valleys and plains hidden beneath kilometres of seawater.

And data from tagged humpback whales shows them migrating along underwater mountain ranges, seeking huge

canyons, where upwellings create rich feeding grounds.

We've discovered that every year, huge numbers of great white sharks migrate to a remote spot in the middle of the Pacific – but we don't yet know why.

Even all our technology hasn't solved some mysteries ... yet.

A production of Terra Mater Studios

SINGAPORE WILD DAY OUT

Written and directed by **Matt Hamilton**
Executive producers: **Sabine Holzer, Walter Köhler**
1 x 50 min., 4K, 5.1 + Stereo

Singapore is one of the most densely populated countries on Earth. Yet, amongst the hustle and bustle of this futuristic metropolis, nature thrives. This is the story of a wild day out in the lives of Singapore's lesser-known residents.

The sun rises over one of the greatest cities on the planet. Amongst skyscrapers and fading neon lights, the curious call of a rooster rings out. A red jungle fowl, ancestor to all domestic chickens, is looking for a scrap. This city has a wild side.

The daily alarm over and the commute begins. A family of smooth-coated otters, 10 strong, heads into Marina Bay to fish. A white bellied sea eagle sets out to hunt amongst giant

container ships. As people flood in from the suburbs, the macaques of Segar Road take their chance to raid gardens. By midday, quiet falls over the city. The otter and macaque family relax in the shade as, in quieter corners, wild boar try their best to steal people's picnics. Along the coast, however, some animals are working through the lunchbreak. It's low tide and mudskippers and sand bubbler crabs are in frenzied activity. Giant saltwater crocodiles, Singapore's top predator, stalk fish in the shallow waters.

Night in Singapore is when the more unusual residents come out to play; flying lemurs and strange pangolins. Palm civets stalk the rooftops and, on special nights, spawning coral puts on a show more magical than the city's lights.

Singapore aims to be the greenest city on Earth. From its first tree-planting day in 1971 to modern 'supertrees' that shelter orchids and sunbirds, this film reveals how nature has found a home in one of the world's greatest urban jungles.

A production of Terra Mater Studios and Dandy Lion Films

From the most familiar to the really surprising.

But this series turns this on its head. We take something so familiar and common we hardly give it any thought, and delve into it in depth to reveal surprising, little-known things you never realised.

We use a humorous visual style that is a mixture of "2 ½ D" animation, licensed clips from YouTube, TikTok, and innovative camera technology using fast-cut and pacy editing to engage you in exploring something that normally doesn't even get a second glance.

We'll pick from

THE WORLD: Volcanoes, Clouds, Rivers;
EMOTIONS: Love, Fear, Humour;
NATURE: Flowers, Pigs, Trees;
HOME: Electricity, Beer, Salt;
PEOPLE: Charles Darwin, Van Gogh, Spies;
YOU: Brain, DNA, Ageing;
ENGINEERING: Trains, Bridges, Bicycles;
MATERIALS: Algae, Bamboo, Plastic; ...
 and many more!

Hosted or hostless, this programme will provide you with everything you ever wanted to know – and more!

SOCIETIES THE ANIMAL KINGDOMS

Written and directed by **Matt Hamilton**
Executive producers: **Sabine Holzer, Walter Köhler**
3 x 50 min., 4K, 5.1 + Stereo

Epic spectacle. Intense drama. Conflict, co-operation, sacrifice and deception. What lies behind the natural world's most engaging stories? The answer is social life. The need to work together to survive.

Hunting wolf packs, nest-sharing birds, rafts of sea otters holding hands or trees that support each other through difficult times; societies and social behaviour take myriad forms. This spectacular three-part series reveals the infinite and fascinating complexities of social living, as well as the challenges faced by any animal society.

What is social behaviour? How do societies form? How are they maintained? How are they exploited for individual gain? How do they fail?

Never explored before, this concept brings new behaviours and characters to our screens, while also approaching more familiar scenes from an entirely new angle. We revisit key characters in different episodes, supported by a host of extraordinary and surprising second characters to uncover the success, and failure, of nature's great societies. As a social species ourselves, viewers will be gripped and stunned by the mirror it holds up to our own way of life.

A production of Terra Mater Studios and Dandy Lion Films

THE STORM

WILDLIFE IN WILD WEATHER

Written and directed by: **Robin Jähne and Michael R. Gärtner**
Executive producers: **Birgit Peters, Sabine Holzer, Thomas Weidenbach**
1x50 min., 4K, 5.1 + Stereo

Every year sees heavy summer storms with thunder and lightning, hail and torrential rain raging over the country. The film shows the extraordinary strategies adopted by animals, from the tiniest insects to foxes and moles, to cope with the threat.

When lightning flashes and thunder roars most animals are very directly exposed to the elements. The film shows their strategies for surviving thunderstorms and downpours unscathed. Some species are highly weather-sensitive. They sense when a storm is brewing and take shelter. Other species actually benefit from storms breaking out – from newly formed bodies of water or unexpected feasts. But basically all creatures have to have their wits about them, when stormy weather approaches like a monstrous beast of prey. One wrong move can be their last.

This film takes viewers literally into the eye of the storm. The oppressive heat before the bad weather breaks, the distant rumbling of thunder, the perilous flashes of lightning and the vehemence of the rain – rarely has the struggle of animals against the elements been captured so intimately. A wildlife documentary with the stylistic devices of a disaster thriller.

A co-production of Terra Mater Studios, Längengrad Filmproduktion, WDR and ARTE

SUM OF THE PARTS

Executive producers: **Sabine Holzer, Walter Köhler**
5 x 50 min., 4K, 5.1 + Stereo

We are all more than the sum of our parts – yet without those parts we wouldn't exist.

We know how the world looks by seeing with our **eyes**. But humans aren't the only ones to depend on the sense of sight, most animals also orient themselves using their eyes.

Whether dog, horse, shrew or human, we all have a **nose** in the middle or front of the face. It can be ruffled, can sniff and twitch, and is one of the most important sensory organs.

Some **ears** are the most obvious feature of the head – others can't be seen at all. They have one simple purpose, to perceive tones and noises.

Feet carry us through the world – human or animal. But not all feet are the same – two legs, four legs, eight legs, lots of legs; however how many feet an animal has, they allow it to move from one place to another.

Every mammal is covered in **hair**, some very sparsely, others with dense, fluffy fur – but even the naked mole is not completely naked.

Eyes, nose, mouth. Hands, feet. Ears. Hair. Skin. In a light, informative but entertaining series, we look at these parts, how they work, how they differ between animals.

A production of Terra Mater Studios

© gettyimages

THAT'S LIFE!

Written and directed by **Steve Nicholls**
Executive producers: **Martin Mészáros, Sabine Holzer**
8 x 50 min., 4K, 5.1 + Stereo

Why do plants and animals look the way they do? Why do they live where they do? In short, why is life like it is?

To answer these questions, we set out on an epic journey that takes us across the whole planet, from poles to tropics, and through 4 billion years of life's history.

Our story ranges from the greatest animals to walk the Earth, to the unseen world of microbes and even molecules, from the workings of the whole planet to the world of quantum mechanics – and everything between.

In the last decade, scientists have revolutionised our view of the natural world, and in this unique series we'll paint a new picture of life on Earth – the greatest story ever told.

Each episode picks a key turning point in the story of life and unfolds the story from that perspective. Each turning point had huge ramifications, both for life itself and for the planet as a whole. As we trace them, we must ask some of the biggest questions in the natural sciences:

Where did life come from? What do we have sex? Why do we die? What is consciousness – and why did it evolve?

A production of Terra Mater Studios

ULTIMATE ANIMAL NATURE'S GREATEST

Written and directed by **Matt Hamilton**
Executive producers: **Sabine Holzer, Walter Köhler**
6 x 50 min., 4K, 5.1 + Stereo

Of the countless species with which we share our planet, a small group really captures our imagination. They fill us with a sense of wonder, awe, even fear. Their images are all around us. They're part of our expressive language and some of the first words our children speak.

Some animals truly connect with us. This is their story.

ULTIMATE ANIMAL is a spectacular, six-part blue chip natural history series about the world's most charismatic and best loved animals. Bringing a fresh approach to top-end wildlife documentary, each episode delivers the ultimate film on one type of animal, creating the feel of an epic special. We build intense drama around a main character, while also covering a range of extraordinary behaviours and stunning locations. The result is the definitive film, showcasing everything you ever wanted to know about your favourite animal. By focusing in on the creatures that really connect, it appeals to a vast global audience. It is also a highly returnable format. There is a long list of animals charismatic enough to feature in an 'ultimate' film. **For this first six-part run, those are Wolf, Lion, Elephant, Bear, Chimpanzee and Shark.**

The future of nearly all our best loved animals is increasingly uncertain. In delivering the ultimate film on each one, our 'bigger picture' sequences also allow us to consider the conflicts and challenges they face.

ULTIMATE ANIMAL reveals the fascinating behaviours, life cycles and conservation of our planet's best loved creatures, all set against a backdrop of stunning, varied landscapes.

World class cinematography and storytelling combine to make these the definitive films on each animal. It has immense appeal and extraordinary returnability, with the potential to become a household name and major event in itself.

ULTIMATE PLANET

THE UNKNOWN STORY OF LIFE ON EARTH

Executive producers: **Sabine Holzer, Walter Köhler**
8 x 55 min., 4K, 5.1 + Stereo

**Earth is the ultimate planet.
Generating change by the way it works, relentlessly remodeling its surface, rearranging the elements of life.**

The incredible diversity of life on Earth and its ongoing evolution is driven by a secret yet colossal force: The huge landmasses as we know them have always been on the move, subject to dramatic change—constantly colliding, heaving, breaking up and, in the process, creating ever new opportunities for life.

When continents collide, thousands of species that have evolved in different worlds invade each other's habitats, while the very crumpling zone may form an entirely new sphere of life above the clouds, to be colonized by new plants and animals. When continents break apart, one species will split up into two—or dozens. At the same time, rifting continents have caused Earth's most disastrous mass extinctions.

In eight visually stunning episodes, we look at the big picture, the long, slow dance between the spheres that make up our world. We look at the uniqueness of the individual continents; and we look at the most extreme place of all, Antarctica. We will investigate what the recent changes on and around Antarctica tell us about the future of the planet's climate and the future of all the other continents—the future for all of us.

URBAN NATIONAL PARKS

WHERE WILDERNESS MEETS THE CITY

Executive producers: **Sabine Holzer, Thomas Weidenbach**
7 x 50 min., 4K, 5.1 + Stereo

Where wilderness meets the city: You'd think of National Parks as remote, wild places but many of them are surprisingly close to – or even within – major cities. And here, iconic wildlife lives alongside the seething metropolis.

This returnable series will travel the world to visit well-known cities and meet the less well-known wildlife on their doorsteps. We'll find a spectacular diversity of nature not only thriving but even taking advantage of their adjacent city. This is where some strange neighbours have learned to live together.

TABLE MOUNTAIN AND CAPE OF GOOD HOPE, SOUTH AFRICA

Table Mountain, often draped in cloud, rises from the sprawl of Cape Town in South Africa – a botanical wonder. Three quarters of the strange plants on the summit are found nowhere else in the world. The steep rock slopes are home to colonies of rock hyraxes, strange little creatures whose nearest relatives are elephants. Boulder Beach hosts a large colony of jackass penguins.

BISCAYNE BAY, FLORIDA, US

A stone's throw from Miami, Biscayne Bay has some of the largest remaining coral reefs on the planet, while manatees cruise the shallow waters. The bay is fringed by tidal forests of mangroves.

TIJUCA, RIO DE JANEIRO, BRAZIL

The statue of Christ the Redeemer towers over the city of Rio de Janeiro and over the Tijuca Forest, a verdant paradise compared to the hustle and bustle of Rio. Black capuchin monkeys, common marmosets and squirrel monkeys scurry through the forest canopy ... but need to look out for margays.

NAIROBI, KENYA

Nairobi National Park is one of the most extraordinary places on the planet. Herds of zebra and antelopes live out their lives against a backdrop of the skyscrapers of Kenya's capital city.

BUKIT TIMAH, SINGAPORE

Several National Parks weave through the city of Singapore, including Bukit Timah – the first of the forest reserves to be created back in 1883 and just 12 kilometers from the very centre of the city.

CUYAHOGA VALLEY, CLEVELAND, OHIO

No one would have expected that bald eagles circle just outside the Cleveland metropolitan area, or that coyotes and otters hunt there. The Cuyahoga Valley is one of the youngest national parks in the U.S., but its history is one of the most exciting.

DONAU-AUEN, VIENNA, AUSTRIA

Although the main channel is busy, the backwaters form some of the largest remaining floodplain forests and marshes along the Danube – the Donau-Auen. The park stretches from the centre of Vienna, downstream to Bratislava in Slovakia. Beavers, storks and bee-eaters call this place their home.

THE WEIGHT OF LIFE

Executive producers: **Sabine Holzer, Walter Köhler**
1x50 min., 4K, 5.1 + Stereo

Life – there's a lot of it. We're familiar with reports of humans dominating the Earth. But there is far more life on the planet than just us. Who or what actually weighs the most?

In the oceans, almost 98% of the biomass consists of plankton, the basis of all life in the sea. Antarctic krill feed on the plankton and there are so many krill in the Antarctic waters that their total biomass is estimated at 500 million tonnes. In comparison, we humans only manage 100 million tonnes. An adult blue whale then eats 16 tonnes of krill a day.

But there's an enormous amount of unseen life right under our feet. In an area of 1 m³ of fertile soil, there are 1,000 trillion bacteria and 1 trillion fungi ... all invisible to us but weighing up to 2kg in total. This secret world is essential for our survival!

To feed humans, around 66 billion chickens, 304 million cattle and 1.5 billion pigs are slaughtered every year – yet nature must provide even more food. Approximately 45,000 spider species worldwide eat up to 800 million tonnes of prey every year – and spiders eat more insects than humans eat meat!

WEIRD BUT WONDERFUL

Executive producers: **Sabine Holzer, Walter Köhler**
1 x 50 min., 4K, 5.1 + Stereo

Why does it always have to be about the handsome, the beautiful or the indescribably cute? Fluffy kittens, clumsy bear cubs and dainty foals on shaky legs may all be wonderful to watch, but isn't our world significantly more colourful, diverse and ... unusual? Isn't there more to life than big, beautiful eyes and soft, silky fur?

It is time to celebrate the less attractive members of the animal kingdom! After all, they often have the more interesting life stories, from tousled owl chicks and slimy beetle larvae to hairless wombat babies. At first glance, they may look like only a mother could love them – but they are fascinating creatures in their own right!

Young aye-ayes are also not much to look at. These long-fingered lemurs give birth to a single infant every two or three years, and the young aye-ayes are born with thin, shaggy fur, green eyes and oversized, droopy ears. Despite their unprepossessing appearance, young aye-ayes display some remarkable physical characteristics.

Closer to home, the dusty attics of old farm buildings in central Europe are often home to barn owlets that squeal loudly to let their parents know they are hungry. The older barn owls are elegant, silent nocturnal predators. The same cannot be said of their scraggy, squawking, semi-naked offspring. The owlets are born with old-looking faces obscured by a hooked beak.

Nature is full of baby animals that would never feature on posters or calendars, but which are none-the-less fascinating. This film celebrates these weird, wonderful creatures and the amazing animals they eventually become.

WILD INDIA

Written and directed by **Matt Hamilton**
Executive producers: **Sabine Holzer, Walter Köhler**
2 x 50 min., 4K, 5.1 + Stereo

**Spectacular scenery. Breath-taking diversity.
Dramatic change. This is the story of Wild India.**

India is one of the most biodiverse nations on our planet. Guarded by an impenetrable mountain range, the elements combine here to create an awe-inspiring realm of intense beauty, filled with charismatic animals.

Towering mountains, bone dry deserts, vast plains and tangled jungles. They may seem worlds apart, but, as our two-part series reveals, India's unique geography means all life in this country is deeply connected.

EPISODE 1: EARTH

India boasts breathtaking natural diversity. Our first episode delves into the amazing power of the Earth that led to India becoming one of the most biologically diverse countries on the planet. We explore the unique habitats of India – from the snow-capped mountain peaks, rain-soaked forests, grasslands, barren deserts to the Himalayan Mountains, the tallest on Earth. We witness magnificent and rare wildlife, including mighty tigers, endangered one-horned rhinos, Asian elephants, enigmatic long-tailed macaques, giant squirrels and the elusive snow leopard. Don't miss the chance to encounter India's extraordinary wildlife and natural beauty!

EPISODE 2: WINDS OF CHANGE

Experience the dramatic seasonal changes of India's distinct habitats in our second episode. Witness how the mighty Himalayas not only isolate but control India's climate, leading to the most intense monsoons experienced anywhere in the world. We find out how winter time, strangely, is the best time for Indian lions to raise their young, and we witness the fierce battles of male king cobras, the rutting of cheetal deer, and the arrival of thousands of demoiselle cranes. We capture the magic of India's seasonal changes.

WILD PERU

LAND OF EXTREMES

Written and directed by **Matt Hamilton**
Executive producers: **Sabine Holzer, Walter Köhler**
3 x 50 min., 4K, 5.1 + Stereo

One nation; three distinct worlds. This three-part series tells the story of a land ruled by extremes, where life thrives in the most challenging conditions imaginable.

Extrême altitude, relentless rain and searing sun have seen ancient civilisations rise and fall. And yet, nature endures; this very adversity fueling some of the most spectacular gatherings of wildlife on our planet. With the world yet to wake up to the wonders of Peru, join us for an immersive cinematic journey as we uncover South America's best kept secret.

EPISODE 1: THE DIVIDING LINE

Peru lies entirely in the tropics, yet our series begins with a world locked in ice. At 18,000 feet, these are the tallest peaks of the Andes Mountains. Their staggering height prevents clouds from passing. It makes them the dividing line between two distinct realms; one wet, the other dry. To survive here takes extraordinary adaption and resilience. Up here, great civilisations have fallen, but nature thrives.

EPISODE 2: THE FOREST OF MIRRORS

In our second episode, we visit a world of breath-taking complexity. Peru's Amazon rainforest is among the most biodiverse regions on Earth. Here, we discover a realm bursting with colour. A land of beautiful and bizarre species and intimate relationships. Like all of Peru's habitats, this is a uniquely challenging place to live, not least because these forests spend half their year submerged in water.

EPISODE 3: THE DESERT COAST

In our third episode, we visit Peru's extraordinary coastline. It is a land of immense contrast; where a seemingly lifeless desert meets some of the greatest gatherings of wildlife on Earth. On land, spectacled bears and sechura foxes struggle for existence beneath the searing sun. In the ocean, myriad marine mammals and enormous colonies of penguins and cormorants thrive on an abundance of prey.

WILD SAN DIEGO

Written and directed by **Neil Losin and Nathan Dappen**
Executive producers: **Ivo Filatsch, Sabine Holzer**
1x50 min., 4K, 5.1 + Stereo

With a population of ~3.4 million people, and more moving in every day, almost all of San Diego looks man-made.

But first impressions can be deceptive: look closely and you'll discover a landscape vibrating with wildlife! Sandwiched between harsh inland deserts and the cold Pacific Ocean, between Mexico and the rest of North America, San Diego is a meeting place. Where these seemingly inhospitable worlds collide, is an explosion of life.

However, the geographic isolation that created so much of San Diego's diversity is now one of its greatest threats. To survive here, animals and plants must learn to live alongside people, or they won't live at all.

We will discover the wild side of San Diego; we will see thousands of migrating ducks land on the bay, coyotes running past a baseball field, dolphins riding waves alongside surfers, whales breaching offshore from coastal skyscrapers. We'll witness California ground squirrels fixing up old tunnels, hummingbirds dipping their beaks into giant African Aloes flowers, and a puma prowling in a neighborhood canyon.

And we'll delight in Grebes dancing over the water in pairs, and harbor seals basking in the sun until it sets – only to marvel at brilliantly blue waves crashing on the beach later that night when dinoflagellates brighten the darkness with bioluminescence.

We'll follow the stories of wild animals making a living throughout a full annual cycle in a landscape reshaped by humans, and we'll discover how, despite its urban transformation, "America's Finest City" is still one of the wildest places in North America.

WILD VIENNA

Written and produced by **Martin Mészáros**
 Executive producer: **Sabine Holzer**
1x 50 min., 4K, 5.1 + Stereo

Vienna – millions of visitors arrive every year, drawn by its art and culture, but there's a secret Vienna ... hidden in the shadows of imperial palaces, ancient churches and magnificent gardens.

Wild boar and roe deer roam spacious parks, kestrels nest on prestigious imperial architecture. Beavers and otters build nests in urban streams and ponds and, after dark, foxes – 4,000 of them at the last count – scavenge for food in suburban streets. In one park alone, scientists found more than 200 European hamsters.

Vienna is a unique combination of ecosystems – green spaces form over half of its land area, and parts of the city lie within the legendary Vienna Woods.

One of Europe's largest wetlands spreads along Vienna's Danube and on to the Austrian border, so that sea eagles patrol the skies and kingfishers dive for prey – the wetlands support more than 700 plant species, 30 species of mammals and 100 species of breeding birds. As the Danube winds through Vienna it divides around an island, over 21 kilometres long. "Danube Island" was built to control seasonal floodwaters and most of the year it's a huge public

swimming pool where people are blissfully unaware of being watched from puddles and marshes – in just a few decades, "Danube Island" has created its own ecosystem supporting frogs, toads, and the rare European pond turtle, but they're joined by the voracious North American red-eared terrapin, released by irresponsible terrarium owners.

Vienna even has its own wine industry, with vineyards sheltering the rare European green lizard, basking in the sun along vineyard paths and hunting for insects under the cover of vine leaves. From vineyard to imperial palace, from hidden ponds to deep, shadowy forests, join us on a tour of hidden Vienna.

A co-production of Terra Mater Studios and Doclights / NDR supported by RTR and Filmfonds Wien
